Subject: **Protective Allocation – IV Sets**

Dear Valued Customer:

At Baxter, we understand the critical importance of consistent availability of our products. However, when supply challenges occur, we strive to promptly notify you of any potential disruptions in our ability to supply to enable minimal impact on clinical care.

In light of recent market events impacting the availability of certain secondary and stopcock sets outlined in Table 1, we are implementing protective allocations at 100% based on historical ordering from August 1, 2023 to January 31, 2024 to help mitigate any potential disruptions.

In addition, we have reviewed the protective allocations on the products listed in Table 2 which have historically been set at 100%. Due to additional market dynamics, we are revising the allocation to align with current customer demand based on historical ordering from the period of August 1, 2023 to January 31, 2024. The protective allocation will remain at 100% to enable a more consistent supply across all customers.
