

RE: AirLife Endotracheal Tube Design Update

March 10, 2026

Dear Valued Customer,

AirLife is proud of our extensive line of high-quality endotracheal tubes. As part of our business process, AirLife routinely evaluates manufacturing efficiencies to ensure quality and continuity of supply. To continue providing you with the highest quality products, AirLife updated the design of our SunMed® Endotracheal Tubes to better meet clinician needs. You may notice a slight difference in appearance, but the form, fit and function of the device remains the same. This will be implemented as a rolling change, and you may start to see the updated product within the next few weeks. A further breakdown of the changes can be seen below:

- The standard bevel cut tip has been updated to a bull-nose tip.
- Per ISO 5361:2023 the depth markings have been updated to show deeper measurements and are now shown every 1 cm.
- Neonatal sized tubes have drastically improved printing with lower depth markings.

Sincerely,

Holly Lockwood
