

March 2025

Dear Valued Customers,

The purpose of this letter is to provide an **update on end-user BD IV Fluids allocation adjustments for March 2025.**

BD is committed to supporting U.S. health care providers in delivering patient care while strengthening supply chain resilience through domestic manufacturing of critical medical devices. Due to challenges related market events, BD made necessary adjustments to specific product allocations in October 2024 to preserve inventory supply health for the broader U.S. market.

In early 2025, BD began experiencing short-term supply disruption for 1L formulations of our IV Fluid products, leading to reduced inventory volumes during that time. Continuity of supply regarding the below SKUs continues to be challenged but we expect improving supply levels throughout the next 90-120 days.

See table below with March allocation benchmark revisions highlighted:

SKU	Description	Allocation
1727170107	IVFLUID 0.9% SALINE 1000ML N17271-701-07	60%
1727171007	IVFLUID LAC RINGERS 1000ML N17271-710-07	60%

For any questions on allocation benchmarks, please align with your BD and distribution sales representatives.

Thank you for your continued support.

Tim Barrett
