

May 9, 2025

Dear Valued Customer,

Due to a nearby fire that impacted a third-party manufacturer's facility, Baxter will be placing ExactaMix automated compounding inlet codes beginning with H93817X on a restrictive allocation, as set forth in Table 1 below, **effective May 9, 2025**. The allocations are based off historical purchases from January through June 2024 but take into account adjustments made for new customers after this time period. All backorders through May 8th for these inlet codes have been cancelled.

Baxter recognizes the role of these products in compounding operations and is working diligently with our third-party manufacturer to reduce the amount of time this product code is on allocation. We do not expect supply interruption on inlet code H938751 at this time, and that code remains off allocation.

Table 1 | Allocation for Products Codes beginning in H93817X

Product Code	Product Description	Allocation
H938173	ExactaMix Inlet. Non-Vented, High-Volume Inlet	75%
H938174	ExactaMix Inlet. Vented, High-Volume Inlet	50%
H938175	ExactaMix Inlet. Vented, Micro-Volume Inlet	75%
H938176	ExactaMix Inlet. Syringe Inlet	75%

We understand the importance of supply continuity for your clinical care and are committed to transparently and proactively communicating any changes in supply with you. To ensure you have the information you need, please visit the [Supply Resources](#) page on our website and download our Supply Availability Report to access the latest information on product supply. Your local Baxter nutrition specialist is available to answer any further questions.

Sincerely,

Kaleem A Qureshi
