

## Multidex® Maltodextrin Wound Dressings

Multidex® wound dressings are a sterile maltodextrin composition with 1% ascorbic acid that supports an optimal wound healing environment across a variety of wound types. Dressings are available in gel or powder options. Multidex® Gel dressings are ideal for use on low to moderately exuding wounds. Multidex® Powder dressings are ideal for use in highly exuding wounds.

- Rapidly mixes with exudate within the wound to form a protective coating
- Maintains an ideal moisture balance to protect against dehydration
- For use on most wound types, including infected or hard-to-heal wounds
- Non-toxic and not systemically absorbed
- Helps control odor while decreasing exudate
- Penetrates wound irregularities to fill tunneling and undermining
- Softens necrotic tissue to facilitate debridement

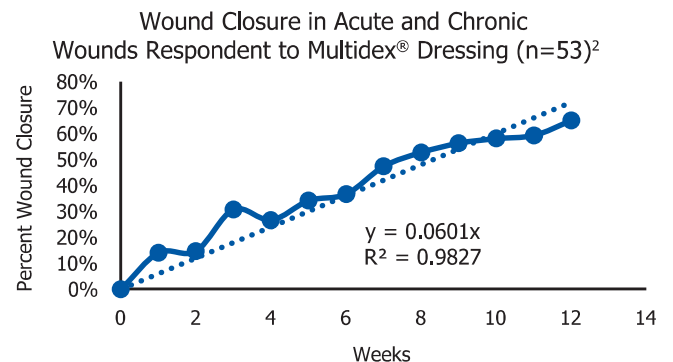

## Proven Efficacy Multidex® Maltodextrin Wound Dressings Stimulate Wound Healing

- Promotes wound healing in chronic venous leg ulcers<sup>1</sup>
- Multidex® mimics in vivo wound behavior related to TGFβ1, MMP-1, and TIMP-1 expressions<sup>1</sup>
- Multidex® increases gelatinase activity to promote collagen turnover<sup>1</sup>

- 73 wounds of various etiologies in a prospective case series<sup>2</sup>
  - 75% greater than 70 years of age
  - 90% had comorbidities documented to impair wound healing
- Excellent autolytic debridement observed with study dressing<sup>2</sup>
  - Supports use in the debridement process to remove all types of necrotic tissue
- Observed overall improvement in chronic, difficult-to-heal wounds<sup>2</sup>
