

TRIAMCINOLONE INJ MARKET UPDATE

Dear Valued Distribution Partner,

A few weeks ago, we messaged you regarding NDC's triamcinolone supply outlook amid a growing nationwide market outage of triamcinolone injection product from multiple manufacturers. As it stands today, NDC has approximately 3,400 triamcinolone 40mg 10ml vials in stock at our warehouse. We may ultimately receive up to another 1,000 vials over the next few weeks, although this is unconfirmed as of now. This will be our only supply of the 10ml vials available until the end of September. We should know towards the middle of September the exact timing to receive additional inventory of 10ml vials and will commit to sharing another update with you at that time. We remain out of stock of the 1ml and 5ml vial configurations and expect re-supply to happen around the same end September timeframe.

Due to the ongoing market supply issues and the limited inventory of 10ml vials we expect we will have over the next 6-8 weeks, we have decided to increase the price of the 40mg/10ml vials to \$24/vial and have placed a limit of 500 vials per order per customer until further notice. We are doing our best to work through this market situation to maintain inventory and reasonable pricing for our customers, and we remain committed to continually re-assessing NDC's price point as the market and our future supply situation evolves.

If you have any questions or would like to further discuss your upcoming triamcinolone needs, please reach out to Tim de Gavre at tdegavre@ndc-inc.com or Kirk Tsahalis at ktsahalis-c@ndc-inc.com. We appreciate you putting your trust in NDC as your pharma sourcing partner and will continue to do our best to support you in this unfolding market environment.

Thank you,
Tim and Kirk
